Installation of MetaMask and Study of Spending Ether per Transaction

Network: Ethereum Sepolia (test network) | Wallet: MetaMask | Account 1: 0x28459...01Be4

Step 1: MetaMask extension installed from the Chrome Web Store

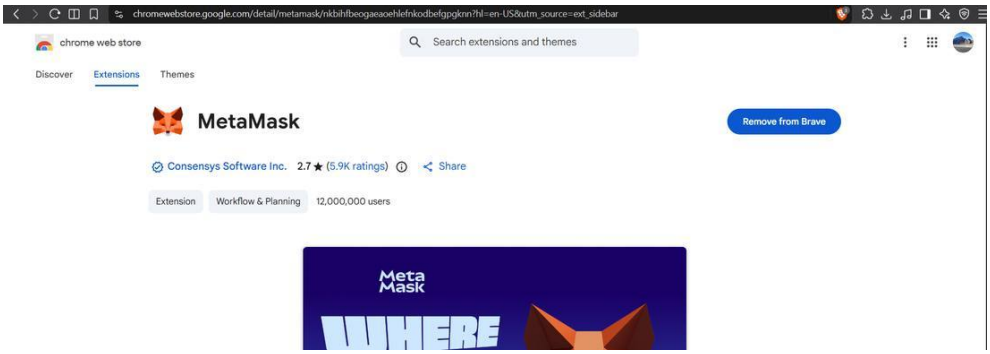

Fig 1: MetaMask (Consensys Software Inc.) installed in the browser

Step 2: Wallet created, set to Sepolia test network

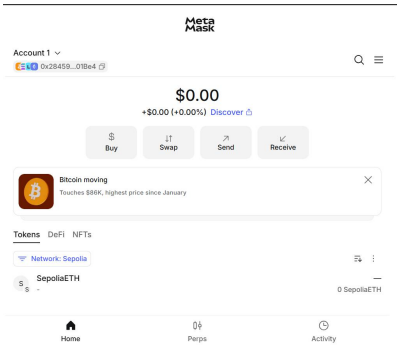

Fig 2: MetaMask wallet (Account 1) on Sepolia, balance 0 SepoliaETH

Step 3: Test ETH requested from Google Cloud Web3 faucet

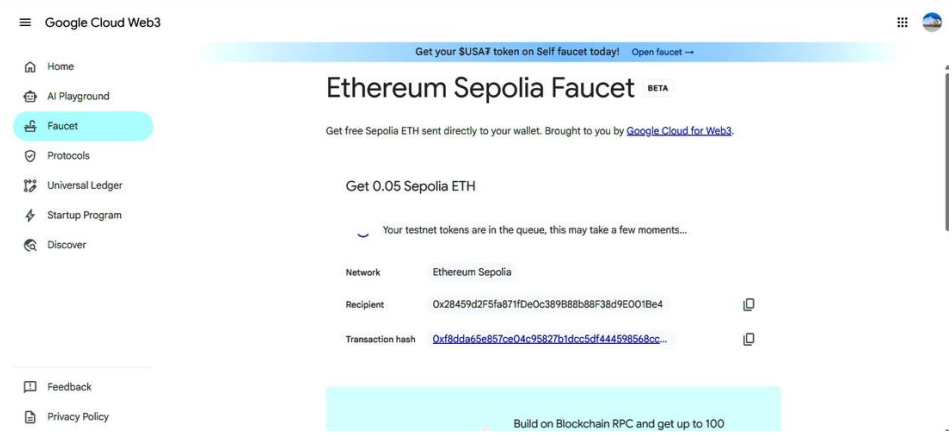

Fig 3: Faucet sending 0.05 Sepolia ETH to the same wallet address

Step 4: Faucet transaction verified on Sepolia Etherscan

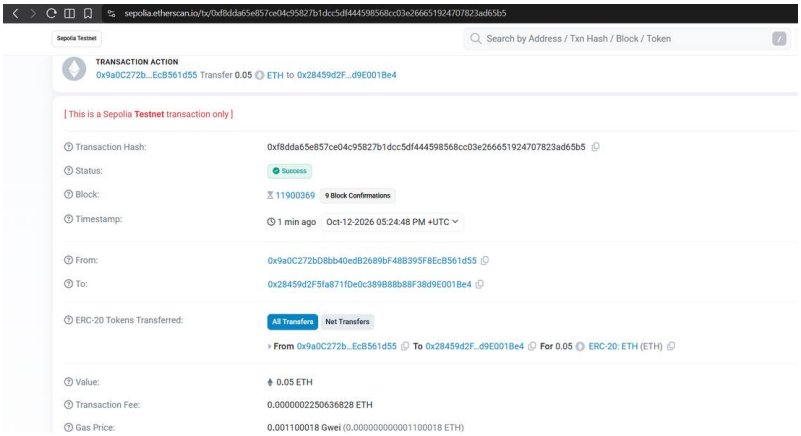

Fig 4: Status Success, block 11900369, value 0.05 ETH, fee 0.0000002250636828 ETH, gas price 0.001100018 Gwei (fee paid by the faucet, not the wallet)

Step 5 & 6: Test ETH received, then a transaction sent

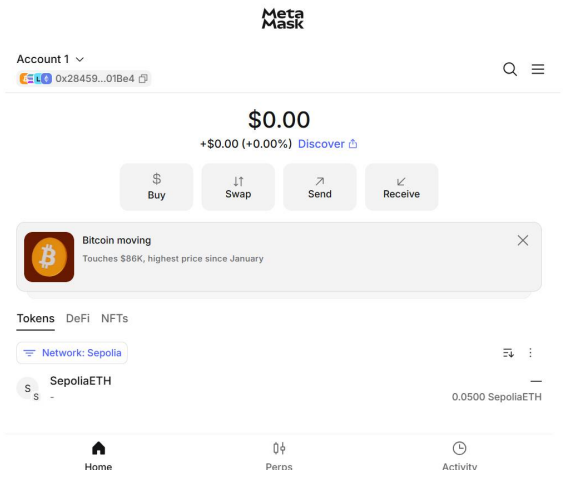

Fig 5: Balance after faucet = 0.0500 SepoliaETH

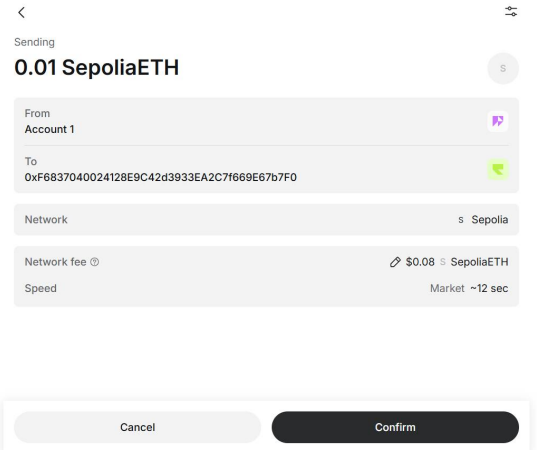

Fig 6: Send 0.01 SepoliaETH, confirmation screen with network fee and speed

Step 7: Transaction in wallet activity, with summary

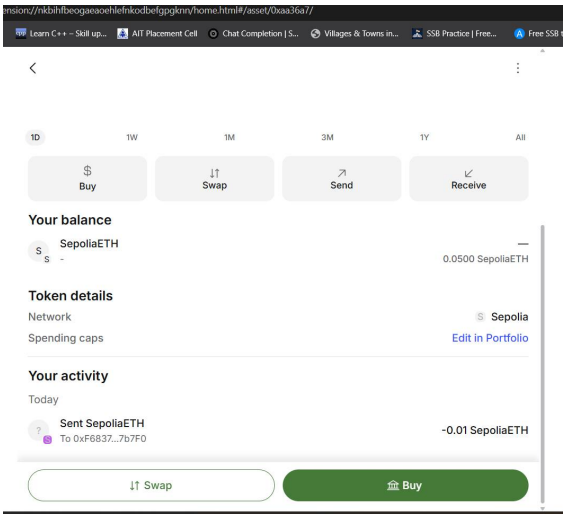

Fig 7: Activity shows "Sent SepoliaETH, -0.01"

Item	Observed
Amount sent	0.01 SepoliaETH
Network	Sepolia (test network)
Network fee (shown)	$0.08 in SepoliaETH (display value only)
Speed	Market, about 12 sec
Fee formula	Fee = gas used x gas price
Real money spent	None, test ETH has no real value

Conclusion: MetaMask was installed and connected to Sepolia, test ETH was obtained from a faucet and verified on Etherscan, and a transaction was sent. Each transaction costs a network fee (gas used x gas price) on top of the amount sent.
